'HC147

- Encodes 10-Line Decimal to 4-Line BCD
- Applications Include:
  Keyboard Encoding
  Range Selection

'HC148

- Encodes 8 Data Lines to 3-Line Binary (Octal)
- Applications Include:
  N-Bit Encoding
  Code Converters and Generators
- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

description

These encoders feature priority decoding of the inputs to ensure that only the highest-order data line is encoded. The 'HC147 encodes nine data lines to four-line (8-4-2-1) BCD. The implied decimal zero condition requires no input condition as zero is encoded when all nine data lines are at a high logic level. The 'HC148 encodes eight data lines to three-line (4-2-1) binary (octal). Cascading circuitry (enable input EI and enable output EO) has been provided to allow octal expansion without the need for external circuitry. For all types, data inputs and outputs are active at the low logic level.

The SN54HC147 and SN54HC148 are characterized for operation over the full military temperature range of −55°C to 125°C. The SN74HC147 and SN74HC148 are characterized for operation from −40°C to 85°C.

absolute maximum ratings over operating free-air temperature range†

Supply voltage, V_{CC}	−0.5 V to 7 V
Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{CC}$)	±20 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$)	±20 mA
Continuous output current, I_O ($V_O = 0$ to V_{CC})	±25 mA
Continuous current through V_{CC} or GND pins	±50 mA
Lead temperature 1,6 mm (1/16 in) from case for 60 s: FK or J package	300°C
Lead temperature 1,6 mm (1/16 in) from case for 10 s: DW or N package	260°C
Storage temperature range	−65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

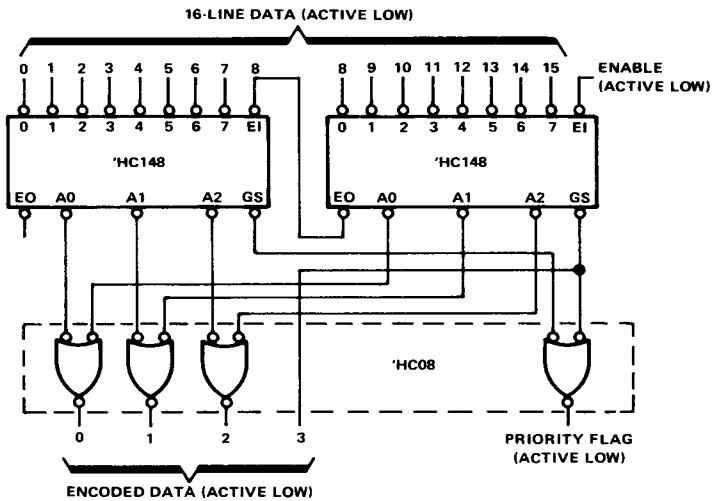
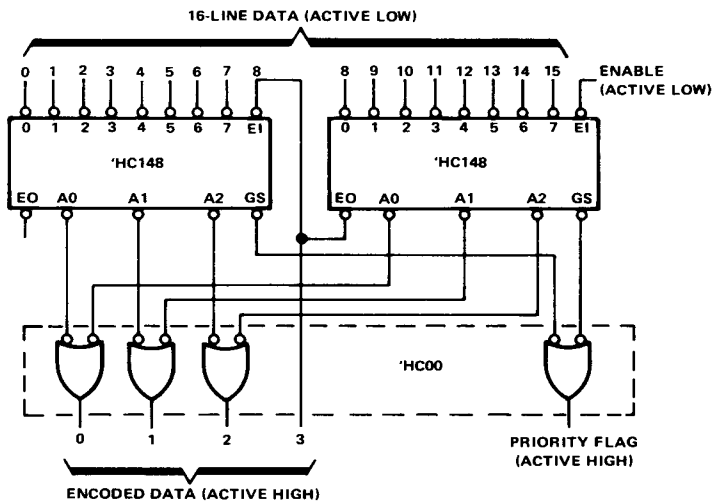
TYPICAL APPLICATION DATA





PRIORITY ENCODER FOR 16 BITS

Since the 'HC147 and 'HC148 are combinational logic circuits, wrong addresses can appear during input transients. Moreover, for the 'HC148, a change from high to low at input EI can cause a transient low on the GS output when all inputs are high. This must be considered when strobing the outputs.
